MAJOR U.S. FINANCIAL SERVICES PROVIDER SIDES WITH NNT'S SECUREOPS™ STRATEGY

THE CLIENT

Recognized as one of the largest independent financial institutions based in the upper Midwest, the organizations is a state-chartered bank with more than $2 billion in assets and over 600 employees, focused on providing banking, insurance, mortgage, trust and wealth management services. With over 60,000 customers and thirty-two full-service locations across the Midwest, ensuring compliance, security, and operational efficiency at all times is a top priority. In order to underpin their overall security initiative, NNT Change Tracker Gen7 R2 was selected, combining the essential critical security controls outlined by all leading security frameworks with best in class change and configuration management and system integrity monitoring.

THE CHALLENGE

In 2018, the financial firm's security team was looking to make improvements to their Cyber Security stack with the adoption of core security disciplines including change and configuration control, file integrity monitoring and secure CIS benchmarks for all assets. In doing so, the provider recognized improvements to overall breach prevention as well as their mean time to discovery (MTTD) and mean time to recover/repair/respond (MTTR).

Over the course of their search, the firm evaluated a number of solutions including vendors such as Tripwire®, but NNT ultimately came out on top based on feature breadth and ease of use.

A senior system engineer with the major financial firm said, "Working with NNT has been great. The price of the NNT solution compared to the alternatives was difficult to beat and the level of support we received throughout our trial was excellent in comparison to the other vendors we looked at".

"I would certainly recommend anyone looking to apply core security controls to their security initiatives to talk to NNT".

THE SOLUTION

NNT Change Tracker Gen7 R2 was ultimately chosen by the firm to help predict and prevent server breach and outages and improve MTTR when outages occur.

New Net Technologies (NNT) is the leading provider of SecureOps™. Our unique SecureOps™ strategy combines the essential, foundational security controls as prescribed by all leading security frameworks such as CIS and NIST with the operational discipline of change management.

By ensuring you have the prescribed essential security controls in place combined with the ability to correlate changes within your environment with an approved ticket or set of intelligent rules, organizations are able to prevent and protect themselves against all forms of breach as well as gain full control of changes for both security and operational peace of mind.

Mark Kedgley, CTO, New Net Technologies adds, "*As experts in SecureOps, we have simply the best protection against cybercrime every minute of every day. Our adoption of the prescribed best practice as recommended by all leading security frameworks combined with our uniquely powerful ability to identify unexpected and potentially harmful changes within the largest IT environments, means our customers are better able to prevent a breach and identify a breach however it may be precipitated.*"
