

ESTABLISHED TELECOM COMPANY PULLS BACK FROM THE BRINK OF PURCHASING TRIPWIRE® AND INSTEAD SELECTS NNT TO ENSURE PCI DSS COMPLIANCE

Maintaining 'Level 1' PCI Compliance

BCH Digital, an established provider of IVR-based call management services, is using New Net Technologies' (NNT) Change Tracker Enterprise solution to ensure the compliance of its telephone card payment service with the stringent Level 1 Payment Card Industry Data Security Standard (PCI-DSS).

Part of an elite group of Level 1 PCI-DSS approved service providers in the UK, BCH Digital offers telecommunications services to clients ranging from small start-up companies to large blue chip organisations; one of these being its PayTel hosted telephone card payment service through which it enables clients to securely process card payments. The stringency of the Level 1 PCI-DSS compliance is such that BCH Digital is independently audited annually against the most recent regulations, currently standing at around two thousand requirements; and must also pass external quarterly network scans. The security of the PayTel service is therefore key for both BCH Digital and its clients.

Chris Johnson, Technical Manager, BCH Digital explains, *"Part of the PCI compliance mandate requires organisations to ensure various file tracking and monitoring systems are in place. We faced a formidable obstacle in finding a solution that could help us with PCI as well as being easy to use and full-featured. We trialled Tripwire® but did not purchase it. We were primed to do so – we had quotes and everything ready for sign off but we had a few support issues whilst testing it out and basically the level of support was so bad we got to the point we didn't feel we could go forward with them. We asked around and someone pointed us to NNT and, well, the rest, as they say is history!"*

A complete IT compliance and security solution

"The difference between the alternative product we tried and NNT was extremely clear; NNT was very responsive from the outset and committed to everything we needed to go live with the solution immediately. Four years later, I'm pleased to say our relationship with NNT is as strong today as it was when we first started using their service.

Their support is first class and they've always had a fast response time to any of our queries. In fact on one occasion during an audit, an assessor raised an issue so we decided to email NNT whilst the assessor was still with us. He was blown away that that within five minutes we had someone on the phone and everything had been resolved."

Continuous compliance - Intelligent change control

NNT makes PCI DSS compliance simple; combining device hardening, event log management, change and configuration management and file integrity monitoring into one, easy-to-use solution. Its Change Tracker™ system auditing and change detection solution provides fast and efficient auditing of all devices via hardening templates for all security and governance policies.

Mark Kedgley, CTO, New Net Technologies, adds, *"As a company we are delighted that Change Tracker™ has given BCH Digital the confidence to deliver its telecoms software which has allowed them to grow as a business. Our security solutions allow businesses of all sizes and complexity to reduce their risk profile, and establish and maintain a hardened IT infrastructure in a simple and cost-effective manner."*

Chris Johnson concludes, *"Looking into the future, with NNT's solution we are sure that we will continue to pass PCI-DSS audits and continue to remain compliant. NNT is providing us with a high-class service and solution that is not only enabling us to deliver a business-critical level of security, but it is a key component of our – and our clients' – ongoing business growth."*

Key Facts:

- ▶ Level 1 Merchants handle in excess of 6 Million payment card transactions each year and must undergo a stringent PCI audit annually by an independent Qualified Security Assessor
- ▶ NNT Change Tracker provides solutions to PCI DSS requirements for system hardening, change control, malware protection and file integrity monitoring
- ▶ PCI DSS Requirement 2 references CIS Benchmarks as the primary recommended source of hardening checklists and NNT is now an elite 'CIS Certified Vendor', delivering verified-accurate CIS audits
- ▶ NNT solutions are now trusted to maintain PCI DSS compliance for hundreds of QSA-audited deployments around the world
